Saya yang membuat surat pernyataan,

Wulan Suci Rahmadhana

## ACKNOWLEDGEMENTS

Alhamdulillahilahi rabbil ‘alamin, all praises belong to Allah Subhanahu wa Ta’ala, the almighty, the king of the world and the last day who has given me the opportunity, health, and strength with His guidance and blessings until I can complete my thesis entitled “ Exploring students’ preferences in using social media for learning English: a TAM analysis”. Peace and blessings be upon the Prophet Muhammad, peace be upon him and his family and companions who have spread Islam from the darkness to the light.

First, on this occasion, I would like to express my deepest gratitude to my beloved supervisor, Dr. Nashriyah, M.A., who has generously given her time, advice, guidance, ideas, and support with great patience during the process of writing and completing this thesis. And I would like to thank all lecturers and teaching staff in the Department of English Language Education, Faculty of Tarbiyah, and Teacher Training at UIN Ar-Raniry. Their dedication and knowledge have profoundly shaped my academic journey and have been instrumental in my growth as a student.

Second, this journey would not have been possible without the unwavering support of my beloved family. My deepest appreciation goes to my dearest parents, Syarbaini & Herawati, for their endless prayers, unconditional love, encouragement, and sacrifices. Their guidance has been my greatest motivation throughout this academic pursuit.

Third, I would like to thank my friends who have supported me throughout this journey. Their motivation, assistance, and companionship have been invaluable, especially during the challenging moments of this final semester. I truly appreciate their kindness and encouragement.

Lastly, I would like to acknowledge myself, Wulan Suci Rahmadhana, for staying strong, persevering through challenges, and striving to complete this journey. This achievement is a testament to my hard work and determination.

Banda Aceh, 18 -03-2025

Wulan Suci Rahmadhana

## ABSTRACT

Name : Wulan Suci Rahmadhana  
Reg. No : 210203052

Major : Department of English Language Education  
Thesis Working Title : Exploring Students' Preferences in Using Social Media for English Learning Motivation: a TAM Analysis  
Main Supervisor : Dr. Nashriyah, M.A  
Keywords : Social Media, Motivation, TAM Analysis

The rapid development of technology has significantly impacted language learning, especially through social media platforms. This study explores the preferences of non-English students at UIN Ar-Raniry in utilizing social media for learning English by applying the Technology Acceptance Model (TAM) framework, which examines perceived usefulness (PU), perceived ease of use (PEOU), attitude towards use (ATU), behavioral intention to use (BIU), and external variables that influence student engagement. Using a quantitative approach with 30 participants, data was collected through a questionnaire, which revealed that YouTube and Instagram were the most preferred platforms due to their interactive and engaging content. Most college students consider social media a flexible and fun learning tool that supports language acquisition and provides easier access to English learning resources. TAM analysis showed that PU and PEOU significantly influenced students' desire to continue using social media to learn English, although challenges such as distractions, misinformation, and lack of structured content remained. This research suggests that social media can be effectively integrated into English learning strategies, provided that students receive guidance in selecting credible educational content. Future research should investigate the long-term impact of social media use on students' language skills and strategies to minimize distractions in digital learning environments.

# CHAPTER 1

## INTRODUCTION

### A. Background of Study

Nowadays, learning a language takes place outside of the classroom as well as within its four walls. Social networking is essential to education, even for young students who are exposed to social media at an early age. Most students use social media extensively and for extended periods of time. Students utilize social media for amusement, to interact with others, to search for information, and to acquire knowledge. This claim demonstrates how, in spite of social media, students are using it for their own autonomous advantage to acquire knowledge (Sivagnanam & Yunus, 2020). The changing nature of education highlights the value of social media in educating students for a worldwide future where communication skills are becoming more and more important.

This research addresses key aspects of incorporating social media into English language learning, with a particular focus on its impact on learner motivation. Recent studies have underscored the potential of social media to enhance motivation by leveraging its interactive features, which encourage active engagement with the target language (Sivagnanam & Yunus, 2020). Social media platforms not only facilitate interaction but also foster a sense of community among learners, further boosting their motivation (Zhou, 2022). This supports the idea that language learning is inherently a social process, where opportunities to connect and collaborate with peers through social media lead to a more immersive and meaningful experience. Moreover, the integration of social media into

language learning has been shown to bridge the gap between formal classroom settings and informal learning environments, creating a seamless and engaging learning continuum (Zhou, 2022).

Social media's potential as a language learning aid has long been acknowledged by researchers, who have examined its impact on several facets of language acquisition. One topic that has drawn more attention recently is how social media use affects students' motivation to interact with and advance their English language proficiency. Previous studies have emphasized the potential of social media as a platform for vocabulary growth, language practice, and cross-cultural communication.

Several studies have recently investigated the connection between social media and student motivation in language learning contexts. Alotaibi (2023) explored the use of Instagram for vocabulary development among Saudi EFL learners and demonstrated that the platform's interactive features can effectively engage students in language activities. Meanwhile, Boothe and Wickstrom (2018) examined how young professional ESOL learners navigate the demands of English for Specific Purposes (ESP) education alongside the pervasive presence of social media. Although they recognized social media's potential to distract, they also noted its capacity to create authentic opportunities for language use.

Similarly, Rasyid et al. (2021) provided a comprehensive review of the literature emphasizing Instagram's positive role in fostering motivation and active participation among English learners. In addition, Rizal and Farikhah (2021) focused on the qualitative dimensions of integrating Instagram into English

language teaching, finding that its use promotes a more interactive and engaging learning atmosphere. These findings are reinforced by Sivagnanam and Yunus (2020), who argued that social media platforms can significantly contribute to vocabulary acquisition among primary ESL students.

Although existing studies have shown that platforms like Instagram support language learning and boost motivation, there remains a lack of research focusing specifically on how social media use impacts English learning motivation among non-English major students in diverse cultural settings, such as in Banda Aceh, Indonesia. Thus, the present study seeks to bridge this gap by exploring the influence of social media, particularly Instagram Reels, on the English learning motivation of students at UIN Ar-Raniry.

The research has extensively highlighted social media's increasing impact on language acquisition. Research has shown that students are increasingly choosing to use social media and other forms of technology to study English (Alotaibi, 2023). According to this tendency, students are no longer apprehensive about using technology in their language learning activities and frequently see it as an advantageous resource. Additionally, studies have shown that most students think social media and other forms of technology help them learn English. There are several benefits to using social media sites like Instagram in language instruction. These platforms offer an engaging and dynamic setting that can promote improved communication skills, cultural exposure, and vocabulary development. Instagram's visual format, which emphasizes sharing pictures and brief videos, might be especially useful for improving language comprehension and vocabulary

growth.

The purpose of the proposed study is to investigate how students' motivation to learn English is impacted by their use of social media. According to recent research, including social media sites like Instagram in English language instruction may benefit students' acquisition of the language. Instagram Reels are one particular element of the site that the researchers have found may offer special chances for language learners to communicate with the target language in a more immersive and dynamic way. Numerous studies have emphasized the potential advantages of utilizing Instagram for learning English, such as improved vocabulary development, interactive language practice, and an atmosphere that is more interesting for students. For example, Rizal and Farikhah (2021) found that students had a favorable opinion of Instagram as a language learning tool, pointing out that it offers a fresh and engaging method of vocabulary acquisition. Their study also explored Instagram's potential as a teaching tool for English language learners and indicated that it may be a useful platform for supporting their language acquisition.

### **B. Research Question**

Based on the background of the study above, the researcher would like to conduct research in order to answer the following questions:

1. What are the benefits of using social media for learning English as perceived by non-English major students at UIN Ar-Raniry?

### **C. Research Aim**

1. To investigate the perceived benefits of using social media for learning

English among non-English major students at UIN Ar-Raniry.

#### **D. Research Significance**

##### ***1. Non-English Major Student***

The study aims to raise students' awareness of using social media, not just for viewing viral content, but also for engaging with educational materials that enhance their English language learning. By interacting with language-focused content, non-English major students can improve their understanding of the language and boost their motivation to learn.

##### ***2. English Teachers***

The findings from the study provided teachers with valuable insights into how social media could be effectively integrated into English language instruction. By understanding the impact of these platforms on student motivation, educators adapted their teaching strategies to better engage students. Ultimately, the goal was for teachers to enrich their instructional practices, leading to improved student outcomes in language acquisition.

##### ***3. Curriculum Developer***

The findings from this study provided curriculum developers with insights into the effective integration of social media into English language programs. By understanding how these platforms increased student motivation and engagement, curriculum developers created resources that matched modern learning preferences. The goal was for curriculum developers to design innovative educational materials that

supported language acquisition and prepared students for a digitally connected world.

## **E. Research Terminology**

It is necessary to include the definitions of the components that are useful for the readers to clarify the terms used in this study.

### ***1. Social media***

The wide definition of social media is a collection of interactive web apps that enable the production, sharing, and curation of user-generated content by users, whether individually or collaboratively. Social media platform examples are many and varied. Facebook, X, Wikipedia, Craigslist, YouTube, and Instagram are a few of them. The aforementioned traits are shared by all social media sites, however, they differ greatly from one another. Particularly, platforms frequently vary in terms of user population, conventions, architecture, and organization (Besana et al., 2010).

### ***2. English Language Learning***

The process of learning and becoming proficient in the English language for those whose primary or native language is not English is referred to as English language learning, often known as English as a Second Language or English for Speakers of Other Languages (Ooi & Abdul Aziz, 2021). This can include people who live in English-speaking nations who are trying to get better at the language, as well as

those who live in non-English-speaking nations who are studying English for personal, professional, or academic purposes.

### **3. TAM**

The Technology Acceptance Model (TAM) explains how a new technology and its various aspects are received and used by the user. Though many models have been proposed previously in the field of Information Systems to describe the relationship, it is this model that has been widely acclaimed and used.
